```
{
  "company_name": "Distributional",
  "founded_year": 2023,
  "headquarters": "San Francisco, CA",
  "founders": [
    {
      "name": "Scott Clark",
      "role": "Co-founder & CEO",
      "background": "Former VP & GM of AI Software at Intel; Co-founder and CEO of SigOpt (acquired by Intel).",
    },
    {
      "name": "Nick Payton",
      "role": "Co-founder",
      "background": "Former VP of Marketing at SigOpt; background in product and growth for AI platforms.",
    },
    {
      "name": "Michael McCourt",
      "role": "Co-founder & CTO",
      "background": "Former Head of Engineering at SigOpt and Senior Staff Research Scientist at Intel.",
    },
    {
      "name": "Tobias Andreassen, Renaud Bourassa, Keith Laban",
      "role": "Co-founders",
      "background": "Senior engineering and product leaders with experience from Stripe, Slack, and Uber."
    }
  ],
  "founding_team": {
    "key_expertise": "The founding team consists of 11 veterans from industry giants including Google, Meta, Bloomberg, Intel, and Yelp.",
    "specialization": "Specialists in high-performance computing (HPC), machine learning optimization, and statistical testing."
  },
  "traction": {
    "funding": {
      "total_funding": "$30 Million",
      "latest_round": "$19 Million Series A (October 2024)",
      "seed_round": "$11 Million (December 2023)",
      "lead_investors": [
        "Two Sigma Ventures",
        "Andreessen Horowitz (a16z)"
      ],
    },
    "participating_investors": [
      "Operator Stack",
      "Point72 Ventures",
    ]
  }
}
```

```

    "SV Angel",
    "Willowtree Investments",
    "Oregon Venture Fund"
  ],
  },
  "milestones": [
    "Currently working with over a dozen design partners in finance, energy, and manufacturing.",
    "Launched the industry's first enterprise-grade 'Adaptive Testing' platform in 2024.",
    "Integrated with major MLOps and CI/CD pipelines to automate AI reliability checks."
  ],
  },
  "problem_statement": {
    "core_issue": "AI models are inherently non-deterministic and 'shifty,' making traditional software testing methods (which expect a single correct answer) obsolete.",
    "barriers": [
      "The Confidence Gap: Enterprises are afraid to deploy AI because they cannot predict when or why it will fail.",
      "Vibe Checks: Most teams currently rely on manual, anecdotal testing rather than rigorous statistical data.",
      "Non-Stationarity: AI behavior changes over time due to data drift or upstream model updates without the developer's knowledge."
    ],
  },
  "solution": {
    "primary_product": "The Distributional AI Testing Platform",
    "key_features": [
      "Statistical Outlier Detection: Analyzes distributions of outputs rather than single data points to identify anomalies.",
      "Automated Test Suggestions: Uses AI to recommend the best tests for a specific model's use case.",
      "Adaptive Calibration: Continuously adjusts test thresholds as the model evolves to prevent 'false alarm' fatigue.",
      "CI/CD Integration: Automatically blocks 'unreliable' model versions from being pushed to production."
    ],
    "value_proposition": "Transforming AI testing from a bottleneck into a scalable, automated process that allows enterprises to ship reliable AI products with the same confidence they have in traditional software."
  }
}
